

Nolam Embedded Systems is a leading manufacturer of professional, yet cost-effective board level products and Computing and Embedded Systems on a full turn-key basis.

Our strong capabilities and wide experience derive from closely working with a large variety of clients within the Defense, Naval, Telecom, Industrial and Medical, industries.

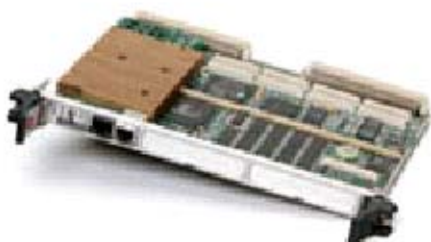

Nolam Embedded Systems is a single source for end-to-end management for complex systems, closely following our customers requirements, from pre-engineering studies to sub-system production and deployment.

Our staff includes high-level HW & SW Engineers, providing our customers with technical support, from application analysis and consultation services, through the design phase, integration, training, maintenance and post-sale support phases

Nolam Embedded Systems provides integrated system solutions to a wide range of customers.

Nolam Embedded Systems delivers its customers with the ultimate "Complete Solution" approach :

- Hardware and software design and customization,
- Pre-engineering design feasibility studies,
- Integration of hardware, software and middleware into a complete sub-system solution,
- Racks and enclosures, from prototypes to rugged airborne ATRs,
- Full integration testing, qualification testing, and acceptance testing,
- Documentation and training,
- Quality management,
- On-site support,
- Obsolescence Management.

## Engineering

To complete our offer of global engineering, Nolam Embedded Systems can help you define the specifications for your projects. We also offer the possibility to develop drivers and BSP's under real time operating systems LynxOS, VxWorks, QNX and under Linux Solaris and Windows NT/XP and if needed the software applications.

We have strong manpower to even design Specific boards if you cannot find what you are looking for. Our engineers will be pleased to define all specs along with you.

## Support & Training

Nolam Embedded Systems offers experienced senior engineers working with an exact duplicate of your system architecture.

This allows us to provide every service from bug resolution to rigorous regression testing.

We can evaluate the impact of hardware and software modifications to your system before any modifications are delivered. Although our remote technical support is excellent, it is occasionally necessary to provide technical support on-site.

Should this be necessary, Nolam Embedded Systems has a team of skilled engineers who can travel to your site and assist with issues as desired. On-Site Support Services are available for a modest fee.

Nolam Embedded Systems prides itself on providing the highest quality technical support in the business. Web-based support coupled with a knowledgeable and accessible team of support engineers means that our customers get their problems fixed fast.
